

Figure 1

Figure 1 consists of two panels, A and B, showing the distribution of the number of children per woman at birth.

Panel A shows the distribution for women who had their first child before age 20. The x-axis is labeled "Number of children per woman at birth" and ranges from 0 to 6. The y-axis is labeled "Percentage of women" and ranges from 0 to 100. The distribution is highly skewed towards zero, with approximately 85% of women having 0 or 1 child, and about 15% having 2 or more children.

Panel B shows the distribution for women who had their first child after age 20. The x-axis is labeled "Number of children per woman at birth" and ranges from 0 to 6. The y-axis is labeled "Percentage of women" and ranges from 0 to 100. The distribution is also skewed towards zero, but less so than in Panel A, with approximately 75% of women having 0 or 1 child, and about 25% having 2 or more children.
